(54) Title: OLIGONUCLEOTIDE INHIBITING THE EXPRESSION OF Star-BINDING PROTEIN (SBP) GENE AND METHOD THEREFOR

(54) 発明の名称: StAR結合蛋白質(SBP)遺伝子の発現を抑制するオリゴヌクレオチド及び方法

(57) Abstract: A means of inhibiting the production of an StAR-binding protein which binds to StAR protein serving as a cholesterol transportation promoter and thus controls the function of the StAR protein. By damaging its function, apoptosis is introduced specifically to a cancer cell. A protein interacting with StAR protein is found out. Then an RNA fragment homologous with a gene sequence specific to this StAR-binding protein (SBP) is synthesized and introduced into a cancer cell. As a result, it is confirmed that the expression of the StAR-binding protein is thus inhibited and, furthermore, the appearance of an apoptotic cell is confirmed.

specifically to a cancer cell. A protein including protein (SBP) is synthesized and introduced into a cancer cell. As a result, it is confirm that the expression of the StAR-binding protein is thus inhibited and, furthermore, the appearance of an apoptotic cell is confirm that the expression of the StAR-binding protein is thus inhibited and, furthermore, the appearance of an apoptotic cell is confirm that the expression of the StAR-binding protein is thus inhibited and, furthermore, the appearance of an apoptotic cell is confirm that the expression of the StAR-binding protein is thus inhibited and, furthermore, the appearance of an apoptotic cell is confirm that the expression of the StAR-binding protein is thus inhibited and, furthermore, the appearance of an apoptotic cell is confirmed by the expression of the StAR-binding protein is thus inhibited and, furthermore, the appearance of an apoptotic cell is confirmed by the expression of the StAR-binding protein is thus inhibited and, furthermore, the appearance of an apoptotic cell is confirmed by the expression of the StAR-binding protein is thus inhibited and, furthermore, the appearance of an apoptotic cell is confirmed by the expression of the StAR-binding protein is thus inhibited and, furthermore, the appearance of an apoptotic cell is confirmed by the expression of the StAR-binding protein is thus inhibited and, furthermore, the appearance of an apoptotic cell is confirmed by the expression of the StAR-binding protein is thus inhibited and, furthermore, the appearance of an apoptotic cell is confirmed by the expression of the StAR-binding protein is thus inhibited and, furthermore, the appearance of an apoptotic cell is confirmed by the expression of the StAR-binding protein is thus inhibited and, furthermore, the appearance of an apoptotic cell is confirmed by the expression of the StAR-binding protein is thus inhibited and, furthermore, the appearance of an apoptotic cell is confirmed by the expression of the start in the expression of the start inhi (57) 要約: コレステロール輸送促進因子であるStAR蛋白質と結合し、StAR蛋白質の機能を調節するStAR結合蛋白質 StAR蛋白質と相互作用する蛋白質を見出し、このSiAR結合蛋白質(SBP)に特異的な遺伝子配列と相同なRNA断 片を合成し、癌細胞内に導入した。その結果、StAR結合蛋白質の発現が抑制されることを確認し、更にアポトーシ ス細胞の出現を確認した。
